The figure consists of two side-by-side computer screen captures of the 'Data Manager' software. Both screens display a table with four columns: 'Time', 'Speed', 'Acceleration', and 'Position'. The left screen shows data for a single trial, while the right screen shows data for multiple trials, with the 'Position' column containing numerical values. The tables are organized into a grid-like structure, with rows representing individual data points or trials.

Figure 1 consists of two side-by-side photographs. The left photograph shows a control panel with several vertical sliders and a digital display. The right photograph shows a computer monitor displaying a data table with columns for 'Time', 'Speed', 'Acceleration', and 'Position'.

Figure 1 shows two side-by-side screenshots of the 'FIND' window in the 'FIND' application. The left screenshot shows the 'FIND' window with a search bar containing 'FIND' and a list of results. The right screenshot shows the 'FIND' window with a search bar containing 'FIND' and a list of results, with a 'FIND' button highlighted.

Figure 1 shows two side-by-side photographs of a 10x10 grid of numbers. The left image is labeled 'Before' and the right image is labeled 'After'. In the 'Before' image, the numbers are in a standard black font. In the 'After' image, the numbers are in a bold, italicized font, and the grid lines are more pronounced.

Figure 1 consists of four scatter plots arranged in a 2x2 grid. Each plot shows the relationship between the 'Number of children' (x-axis) and the 'Number of children in household' (y-axis). The top-left plot is for the 'All' group, the top-right for 'Non-Black', the bottom-left for 'Black', and the bottom-right for 'Non-Black'. All plots show a positive correlation, with the 'All' and 'Non-Black' groups showing a steeper slope than the 'Black' group.

A schematic diagram of a two-dimensional lattice. It consists of a grid of squares. The top row of squares is shaded gray, while the bottom row is white. A small circle is positioned at the center of the bottom row of squares.

Figure 1 illustrates the experimental setup. A participant is seated at a table, looking at a video screen. The screen displays a 3x3 grid of numbers. The participant is instructed to perform a task on the numbers. The setup includes a video screen, a participant, and a table.

Figure 1 consists of two tables, (a) and (b), showing the effect of the number of trials on the number of correct responses. Both tables have 'Number of trials' on the x-axis (1 to 10) and 'Number of correct responses' on the y-axis (0 to 10). The data is presented as a grid of values, likely representing the probability of a correct response given a certain number of trials.

Table (a) shows results for the 'Number of trials' (1, 2, 3, 4, 5, 6, 7, 8, 9, 10) and 'Number of correct responses' (0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10). The values generally increase with the number of trials, indicating a positive correlation.

Table (b) shows results for the 'Number of trials' (1, 2, 3, 4, 5, 6, 7, 8, 9, 10) and 'Number of correct responses' (0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10). The values also generally increase with the number of trials, showing a similar trend to table (a).

The figure consists of two side-by-side scatter plots. Both plots have 'Number of Children' on the x-axis and 'Number of Adults' on the y-axis. The left plot shows a positive linear trend, while the right plot shows a negative linear trend.
